

The world leader in water and rope rescue education since 1979

Swiftwater Rescue Technician[®] Advanced

This course integrates techniques learned in SRT1 and TRR:TL, taking the students beyond the emphasis on self-rescue to concentrate on victim rescue. Students are exposed to more complex water rescue situations including a mock night river rescue scenario. The three day course includes 4-6 hours of classroom instruction, followed by two and one-half days of hands-on skill development. Students are introduced to the role and utilization of various skills in river and flood rescue, including rope systems, management of litters & patient raising systems, highline systems, advanced river search concepts, performing rescues at night or in low visibility, and basic flood disaster management. Completion of the SRTA along with SRT and TRRTL satisfies the requirement outlined in NFPA 1670 Surface/Swift Water Technician Level.
